

SAMBHAJI MURDARE

7499533902 | murdaresambhaji4@gmail.com | LinkedIn | GitHub | Pune, Maharashtra

PROFILE

Experienced Software Developer with 2+ years of experience building production-grade automation systems and web platforms. Specialized in Python for automation, data processing, scripting, and internal tooling, including Excel workflows and PDF data extraction. Proficient in Vue.js and Laravel for admin panel development, backend API design, and complex business workflow implementation. Strong foundation in OOP, RESTful architectures, and clean code practices, focused on building scalable and reliable systems.

EDUCATION

Bachelor of Engineering in Computer Engineering <i>Sinhgad Institute of Technology and Science, Pune - CGPA: 7.75</i>	2019–2023
HSC <i>Residential Jr. College of Science - Percentage: 65.23%</i>	2019
SSC <i>Residential High School - Percentage: 81%</i>	2017

SKILLS

Languages: Python, HTML, CSS, JS, PHP, OOP, SQL
Frameworks/Libraries: Django, Vue.js, Laravel, Requests, BeautifulSoup, Streamlit, PIL, OpenCV, CNN
Tools/Platforms: Git, MySQL, VS Code, Jira, PyCharm, GitHub, Linux, Vim, Terminal, FCM
Soft Skills: Time Management, Leadership, Collaboration, Communication, Adaptability, Creativity

EXPERIENCE

Software Developer <i>Youhonk - vioron internet private limited</i>	Apr 2025 – Present <i>Pune, India</i>
- Working as a Full-Stack Developer on the Youhonk vehicle service management platform, primarily focusing on Admin Panel development using Vue.js, Laravel, and Element UI. - Designed and implemented complex dynamic admin interfaces including conditional forms, validations, file uploads, media previews, and reusable component structures. - Contributed to backend API design and improvements by reviewing request/response structures, fixing data inconsistencies, optimizing queries, and supporting production debugging. - Worked on critical production workflows such as workshop reassignment, pricing logic recalculation, vendor onboarding, document management, order lifecycle handling, and IVR integration support. - Developed Python automation scripts for Excel processing, IMEI handling, packing list generation, bulk data utilities, and internal operational tools to reduce manual effort. - Collaborated closely with cross-functional teams including backend engineers, operations, and product teams to ensure stable releases and consistent platform behavior.	
Junior Software Developer <i>HashTrix Technologies Pvt. Ltd.</i>	Jan 2024 – Mar 2025 <i>Pune, India</i>
- Gained hands-on experience in Python development, software development workflows, and version control using Git and GitHub. - Contributed to ongoing projects by writing reusable code snippets, assisting with testing, debugging, and supporting feature-level implementations. - Worked on smaller modules and components under guidance while learning industry-standard tools, libraries, and best practices. - Continuously updated skills by exploring new Python libraries, tools, and development methodologies to improve code quality and productivity.	

PROJECTS

Youhonk – Vehicle Service Management Platform

Apr 2025 – Present

Technologies: Vue.js, Laravel, PHP, Python, MySQL, Element UI, Git

- Worked on a large-scale vehicle service marketplace platform connecting customers, workshops, and internal operations via mobile apps and a centralized admin system.
- Led development of the Admin Panel using Vue.js and Laravel, implementing critical workflows including vendor onboarding, workshop management, banners, vouchers, order lifecycle handling, pricing logic, and reassignment flows.
- Built highly dynamic admin interfaces with conditional forms, validations, file uploads, media previews, and reusable modular components.
- Contributed to backend API design, query optimization, data consistency fixes, and production-level debugging in collaboration with backend engineers.
- Supported live production operations such as workshop reassignment, pricing recalculation, vendor document management, and IVR integration workflows.
- Developed Python automation tools for Excel processing, IMEI handling, packing list generation, and bulk data utilities to reduce manual operational effort.

Intelligent Automated E-commerce Procurement & Reconciliation System

Technologies: Python, Selenium, PyAutoGUI, Pandas, Regex, pdfplumber, OpenPyXL

- Designed and engineered a resilient, full-cycle automation system for high-frequency e-commerce procurement and financial reconciliation.
- Implemented a hybrid interaction engine combining Selenium (DOM-level control) and PyAutoGUI (computer vision-based OS-level interaction) to handle dynamic UIs and unstable DOM structures.
- Built adaptive execution logic with rotating browser profiles, persistent sessions, and fallback selector strategies to ensure reliability during high-traffic scenarios.
- Developed real-time validation and checkout handling mechanisms to prevent execution failures caused by UI re-renders or quantity limitations.
- Created a PDF-to-Excel ETL pipeline to extract structured invoice data (Invoice No, Order ID, IMEI/Serial Numbers, pricing) from unstructured documents.
- Exported normalized, ERP-ready Excel reports using Pandas and OpenPyXL, significantly reducing manual reconciliation effort.

Firebase Push Notification System

Technologies: Python, Firebase Cloud Messaging, JavaScript

- Built a backend service using Firebase Cloud Messaging to deliver real-time push notifications to mobile applications.
- Implemented secure APIs for device token registration, topic subscription, and notification delivery.
- Integrated FCM with mobile clients to handle foreground and background notifications reliably.

Integrated Inquiry Management System (IIMS)

Technologies: Python, Django, HTML, CSS, JavaScript

- Developed a web-based inquiry management system for educational institutes to track and manage prospective student inquiries.
- Implemented role-based authentication for admin and staff users.
- Built full CRUD functionality with filtering and search support.
